

UK CHANNEL MARKET CONTINUES TO EMBRACE INDORSE'S AWARD-WINNING INFORMATION ASSURANCE SOLUTIONS

U.K.-Based Sirius Data Targets Defense and Security Customers with Content- Based Data Assurance— Implementing Better Control Procedures for International Traffic in Arms Regulations

U.S., New York and U.K., London – September 1, 2009 – [InDorse Technologies](#) today announced that Sirius Data has selected its award-winning information assurance solutions for its context-based security policy enforcement and ability to automatically group scattered documents into logical categories. InDorse's new U.K.-based channel partner will leverage InDorse's solutions to target, secure and classified customers with the support of their CESG CLAS accredited consultants. InDorse has enabled Sirius Data to offer a new service to accelerate International Traffic in Arms Regulations (ITAR) processes and to meet the criteria required by defense contractors, government and security agencies.

Rob Marano, InDorse Technologies' founder and CEO said, "Utilizing InDorse's solutions, channel partners are quickly finding new areas to expand into and offer a host of services for discovering and grouping all documents based on selected criteria as well as applying strict 'need to know' security policies that follow the documents to prevent unapproved access. We welcome Sirius Data as an InDorse partner."

John Corr, managing director of Sirius Data, a U.K. specialist in storage, messaging and security products and services, underscores the value of InDorse Technologies relative to competitive solutions and his client base.

"Our evaluation of the security product vendors led us to conclude that, whilst useful in support of digital rights management (DRM) and data leakage protection (DLP), there was nothing like InDorse or as comprehensive in its capabilities. We have worked with other vendors in the past, but were attracted to InDorse due to their ability to immediately apply the appropriate, context-based security policy to any file and enforce this policy at every usage session. More importantly for us, InDorse's ability to logically group documentation means that we can provide product or service-based solutions, complete with information assurance throughout."

About InDorse Technologies

Located in New York, NY, and London U.K., InDorse Technologies provides a new level of information accountability that cuts across an organization's departmental silos to provide a unified, holistic view into every person and every application/service that touches sensitive information. Leveraging the native security elements contained in most documents, InDorse discovers, organizes, classifies and

tracks all activity associated with sensitive information. Our customers achieve new value in their ability to derive information transparency by providing comprehensive security, better risk management, greater adherence to internal business governance as well as external government and industry mandates.
