InDorse Technologies Wins the Emerging Solutions Demonstration at CSO Magazine's The Security Standard

New York, NY – September 30, 2011 – [InDorse Technologies](http://www.indorse.com), the leading provider of file protection software, today announced that LiveInDorse, a Web conferencing security solution, was selected as the top innovation during the Emerging Solutions Demonstration at CSO Magazine's [The Security Standard](#) event.

"The Security Standard was created to be a platform for the nation's top security and risk minds to come together and discover the newest approaches to securing their organizations," said Bob Bragdon, publisher, CSO Magazine. "Part of this discussion involved looking into the cutting edge products that will keep businesses safe against rapidly evolving threats. InDorse's ability to demonstrate a solution that secures a businesses need without interrupting business flow stood out to our judges."

During the Emerging Solutions Demonstration, presenters were given five minutes to demonstrate how their new product will change the security marketplace, followed by a five minute Q&A session conducted by CSO Magazine's panel of judges including top-flight CSO's and security thought-leaders.

"The Security Standard bestowed this great honor on my team and I'd like to acknowledge their foresight into recognizing the emerging solutions that will keep companies safe for years to come," said Rob Marano, President and CEO of InDorse Technologies. "The information security industry is experiencing a both interesting and dangerous time. Traditional security strongholds are eroding as a result of increased mobility and business flow. In light of today's collaborative business environment, it's time for organizations to reassess our approach to security."

About InDorse Technologies

Located in New York, NY, InDorse Technologies provides award-winning file protection software. InDorse delivers a new level of file intelligence and assurance that supports risk management, audit, and security objectives. Leveraging the native security elements contained in files, InDorse discovers, organizes, classifies, watermarks, enforces, and tracks all files that contain sensitive information, inside or outside the corporate network. InDorse provides this protection without impact to end users, or any additional desktop software or agents, enabling business and collaboration, while transparently adding additional layers of monitoring and protection.
